Elevating Critical Communication to the Next Level

Fast & Easy Provisioning

PRO ONE Alpha provides an efficient and streamlined setup with remote management and configuration, significantly reducing turnaround time. The integrated Mobile Device Management (MDM) system enables seamless remote provisioning, ensuring swift and smooth deployment across your organization.

Unlimited Coverage

Experience extensive coverage through the power of public 4G/5G networks, providing seamless connectivity. For enhanced reach, additional coverage solutions can be seamlessly integrated, ensuring reliable communication.

Ease of Regulatory

Experience a streamlined communication solution that operates without the need for regulatory licenses. Designed to meet compliance standards, it ensures smooth deployment and operation, removing the complexities of regulatory approvals and allowing you to concentrate on your business-critical tasks without interruptions.

End-to-end Support

Our comprehensive end-to-end support service offers both on-site and off-site assistance, ensuring seamless operation from start to finish. From initial setup to ongoing maintenance, our dedicated team provides expert troubleshooting and updates, guaranteeing smooth and reliable performance for your mission-critical communication needs.

DEVICES THAT MEET YOUR REQUIREMENTS

We offer a robust, open device ecosystem with a wide range of Mission Critical X (MCX) devices, providing you with the flexibility to choose the best fit for your requirement. With no device lock-in, you have the freedom to bring your own device (BYOD) or select from top-tier professional-grade options.

Our advanced Mobile Device Management (MDM) solution ensures efficient remote management, regular software updates, and enhanced security, keeping your devices secure and up-to-date. The ecosystem also includes a variety of accessories, making it adaptable to different operational environments.

PRO ONE Alpha devices are built for enterprise ruggedness, delivering reliable performance across large industries. Designed for critical communications, these devices are durable, easy to use, and cost-effective, making them an invaluable asset in demanding conditions.
